BLOCK & INLINE ELEMENTS

Block VS Inline Elements

BLOCK-LEVEL ELEMENTS:

INLINE ELEMENTS:

Block Elements

BLOCK ELEMENTS : A block-level element always starts on a new line, and the browsers automatically add some space (a margin) before and after the element.

A block-level element always takes up the full width available (stretches out to the left and right as far as it can).

`<p>`, `<h1>`, `<h2>`, `<h3>`, `<h4>`, `<h5>`, `<h6>`, ``, ``, `<dl>`, `<pre>`, `<hr/>`, `<blockquote>`, and `<address>` elements are all block level elements.

Examples are -

`<p>`Hello World`</p>`

`<div>`Hello World`</div>`

Inline Element

INLINE ELEMENTS : An inline element does not start on a new line.

An inline element only takes up as much width as necessary.

This is a `` element inside a paragraph.

Examples are -

`` Hello World ``

``, `<a>`, `<code>`, ``, ``, `<cite>`, `<button>`,
`<input>`, `<textarea>`, `<select>`, `<small>` are some of the inline tags.
